

User can find and understand the health of assets helping to make the right decision for the network, creating and managing Portfolios.

Role: UX & UI Designer

nationalgrid

Project Overview

Asset Intelligence (AI) is a module within Electricity Transmission (ET). There are several squads that come under this umbrella, one of which is

- **Search Network & Integrated Search.** This squad understands the health of assets and aids in making smart network decisions as well as in building and maintaining portfolios.
- **Portfolio Builder,** which creates, manages, shares, and makes intervention decisions, is the other squad.

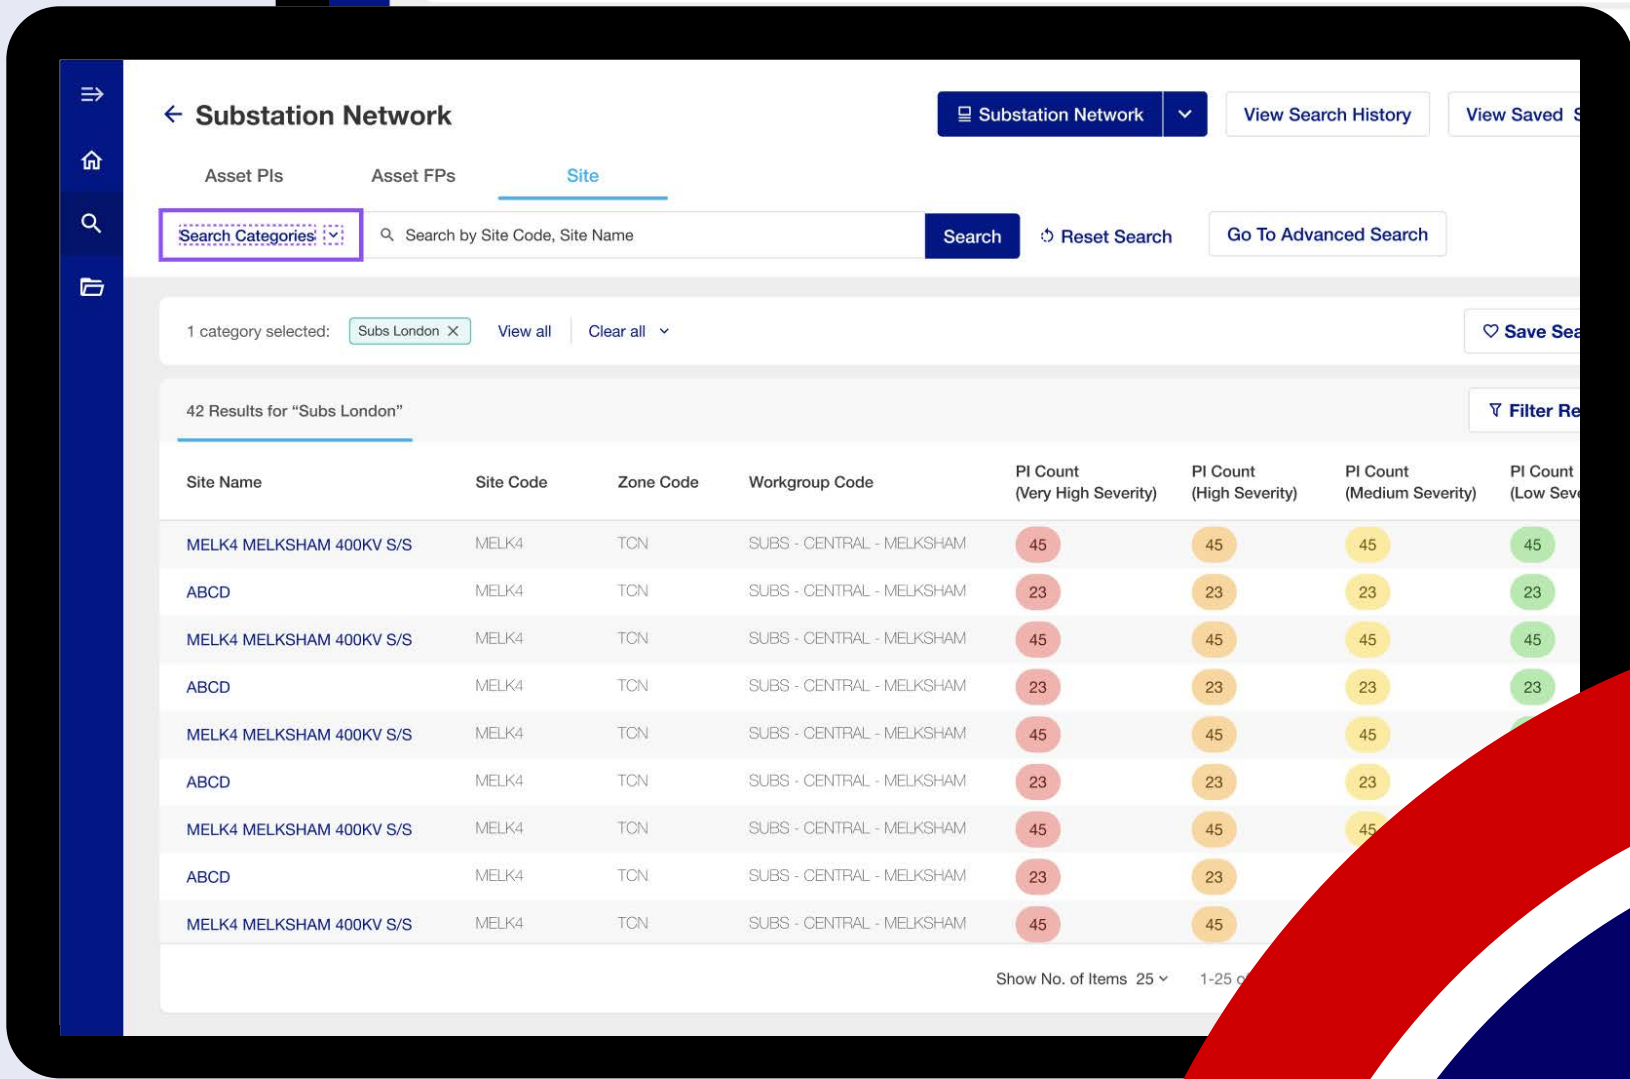

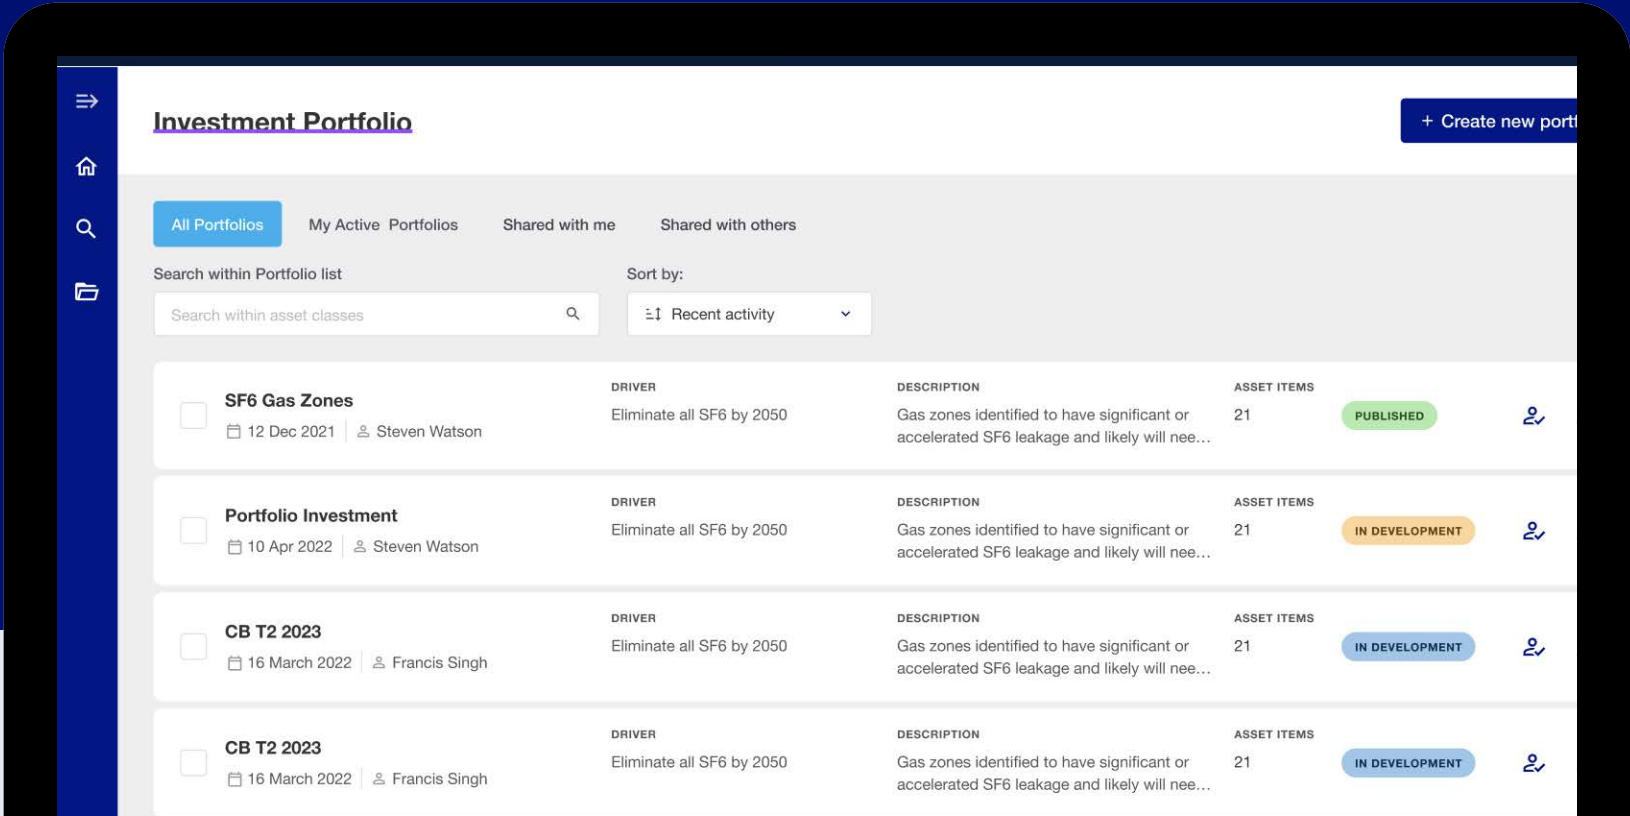

My Role

UX/UI Designer

My Responsibilities

- Design System
- Wireframing & Prototyping

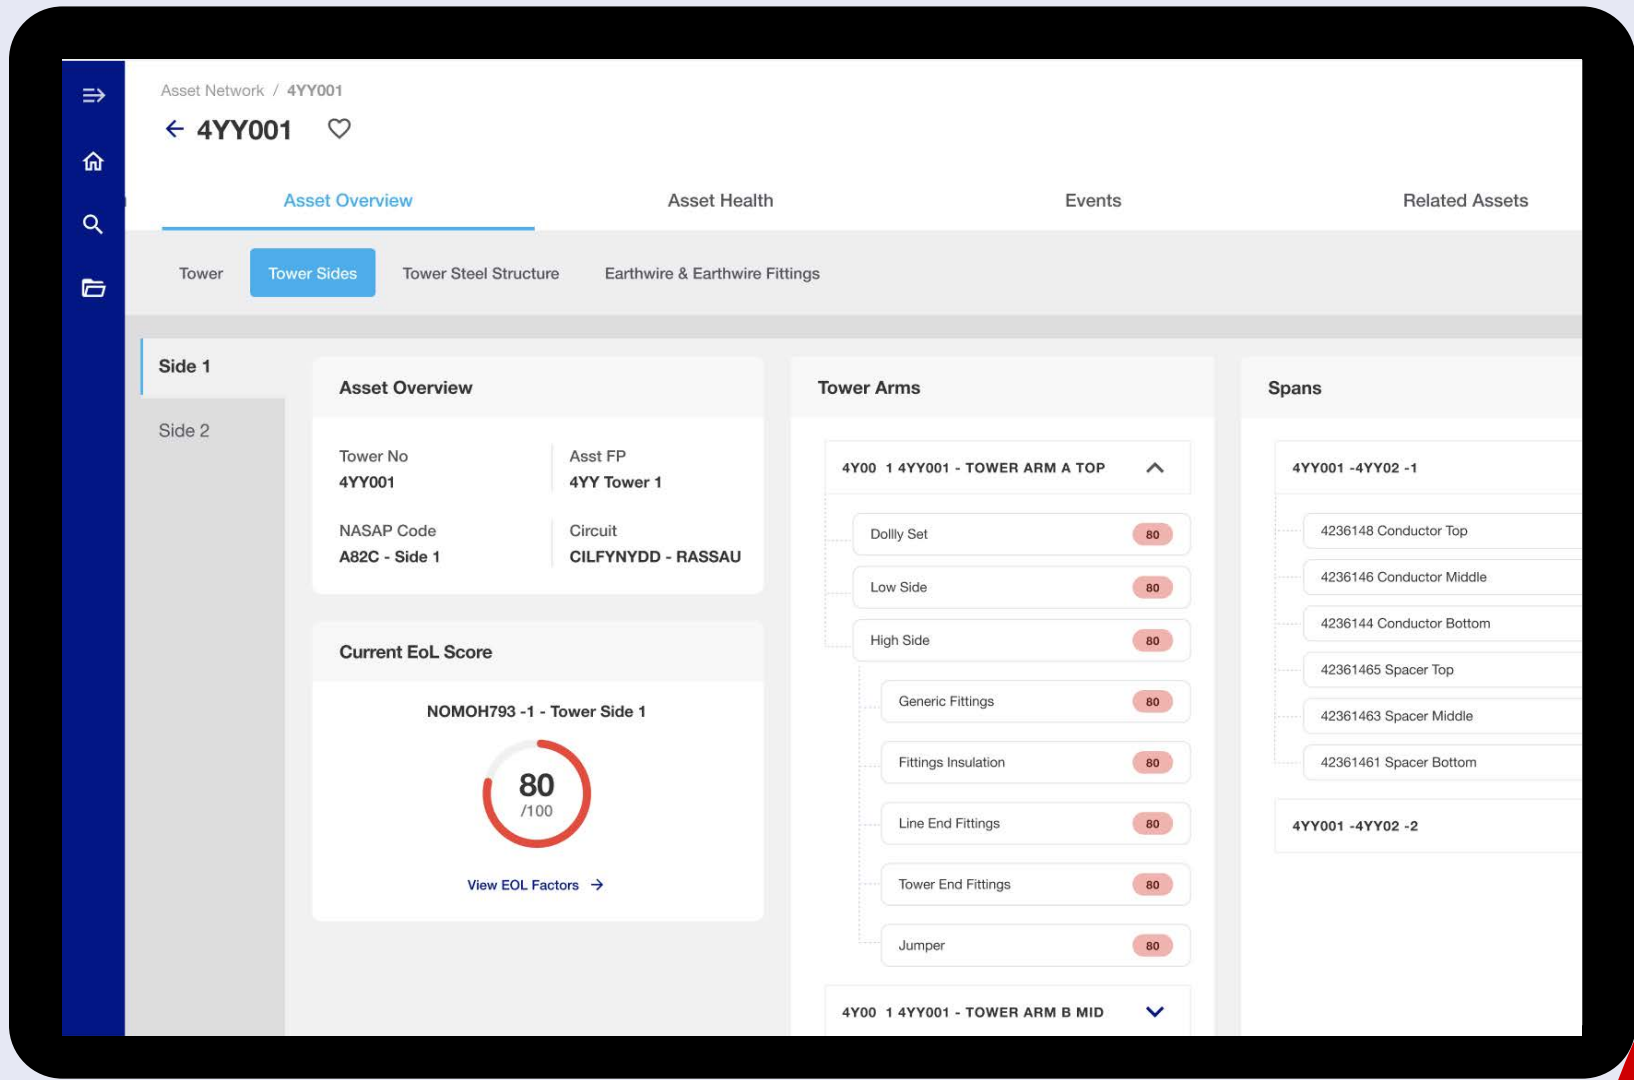

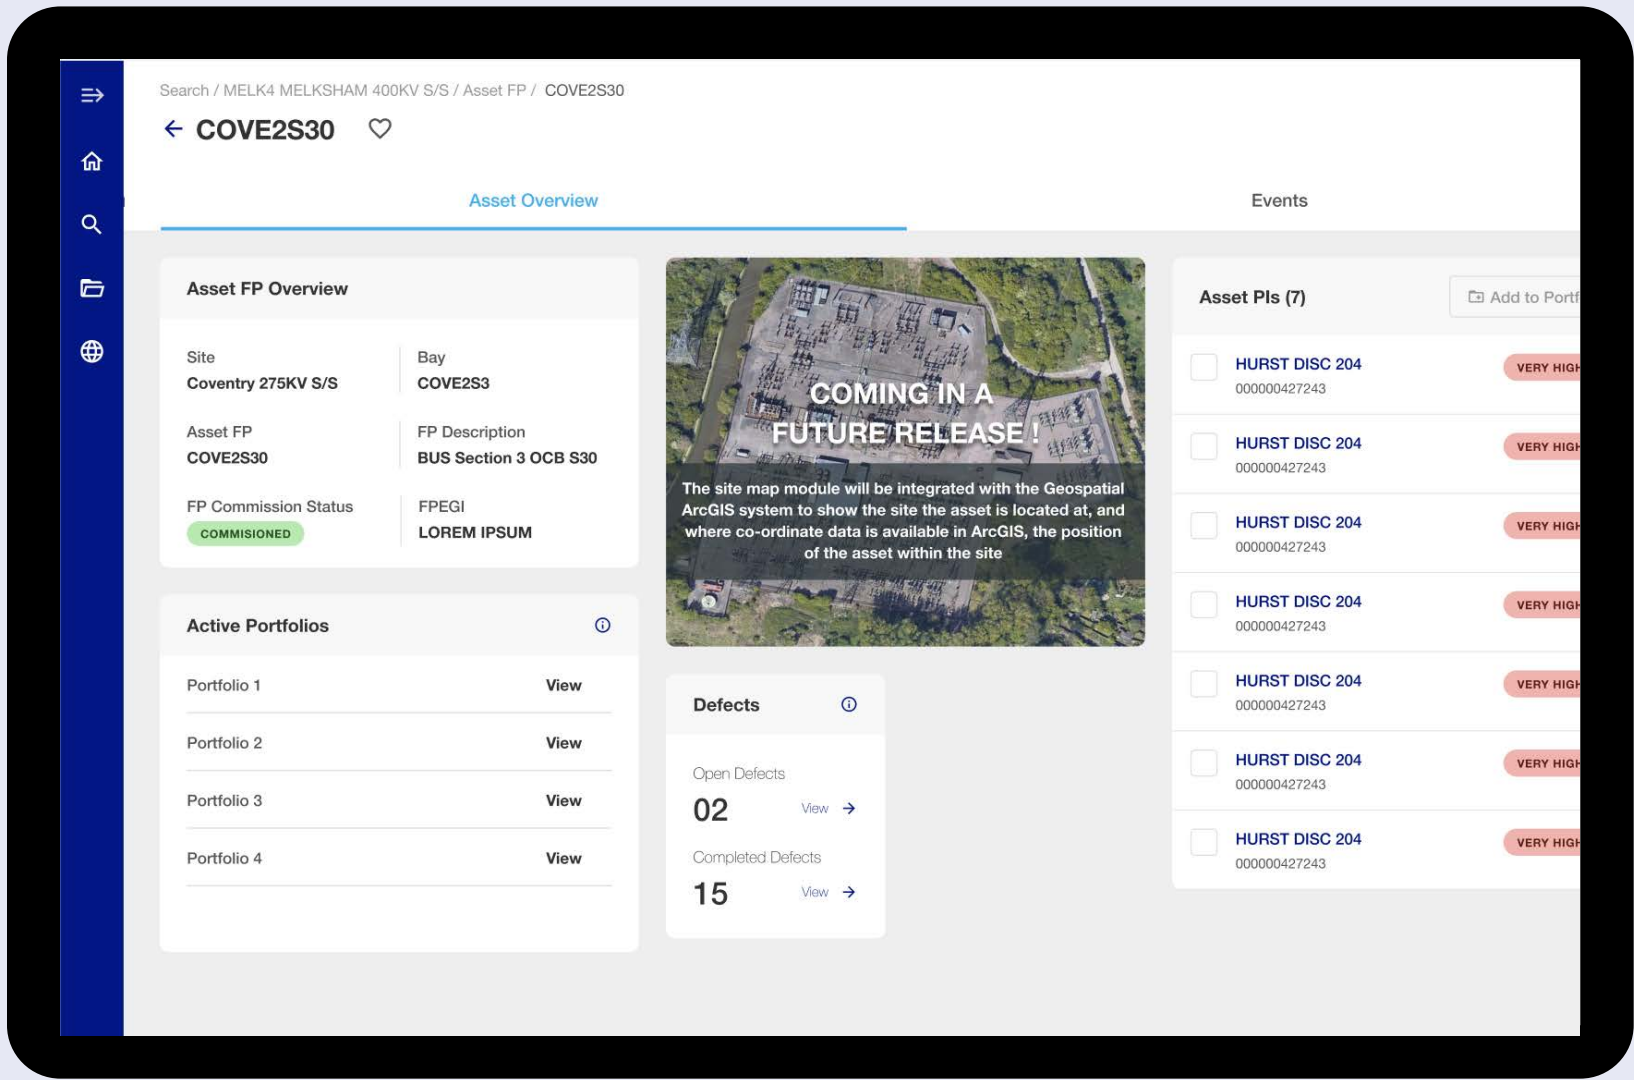

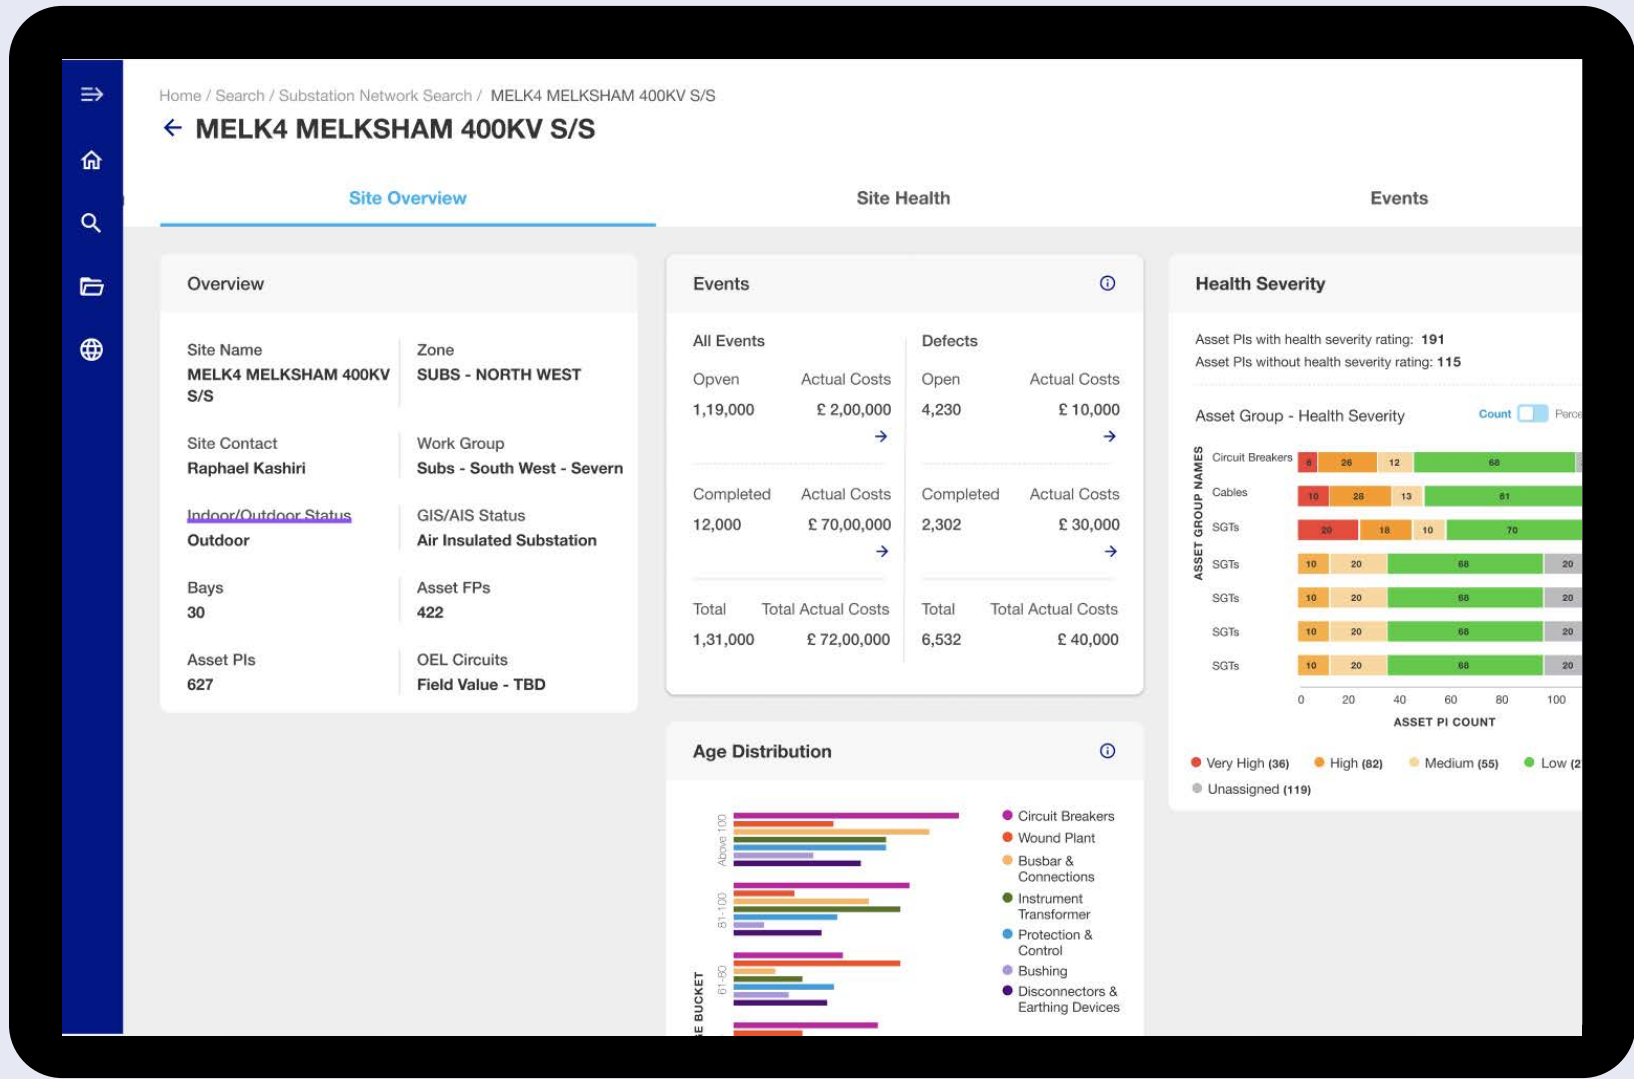

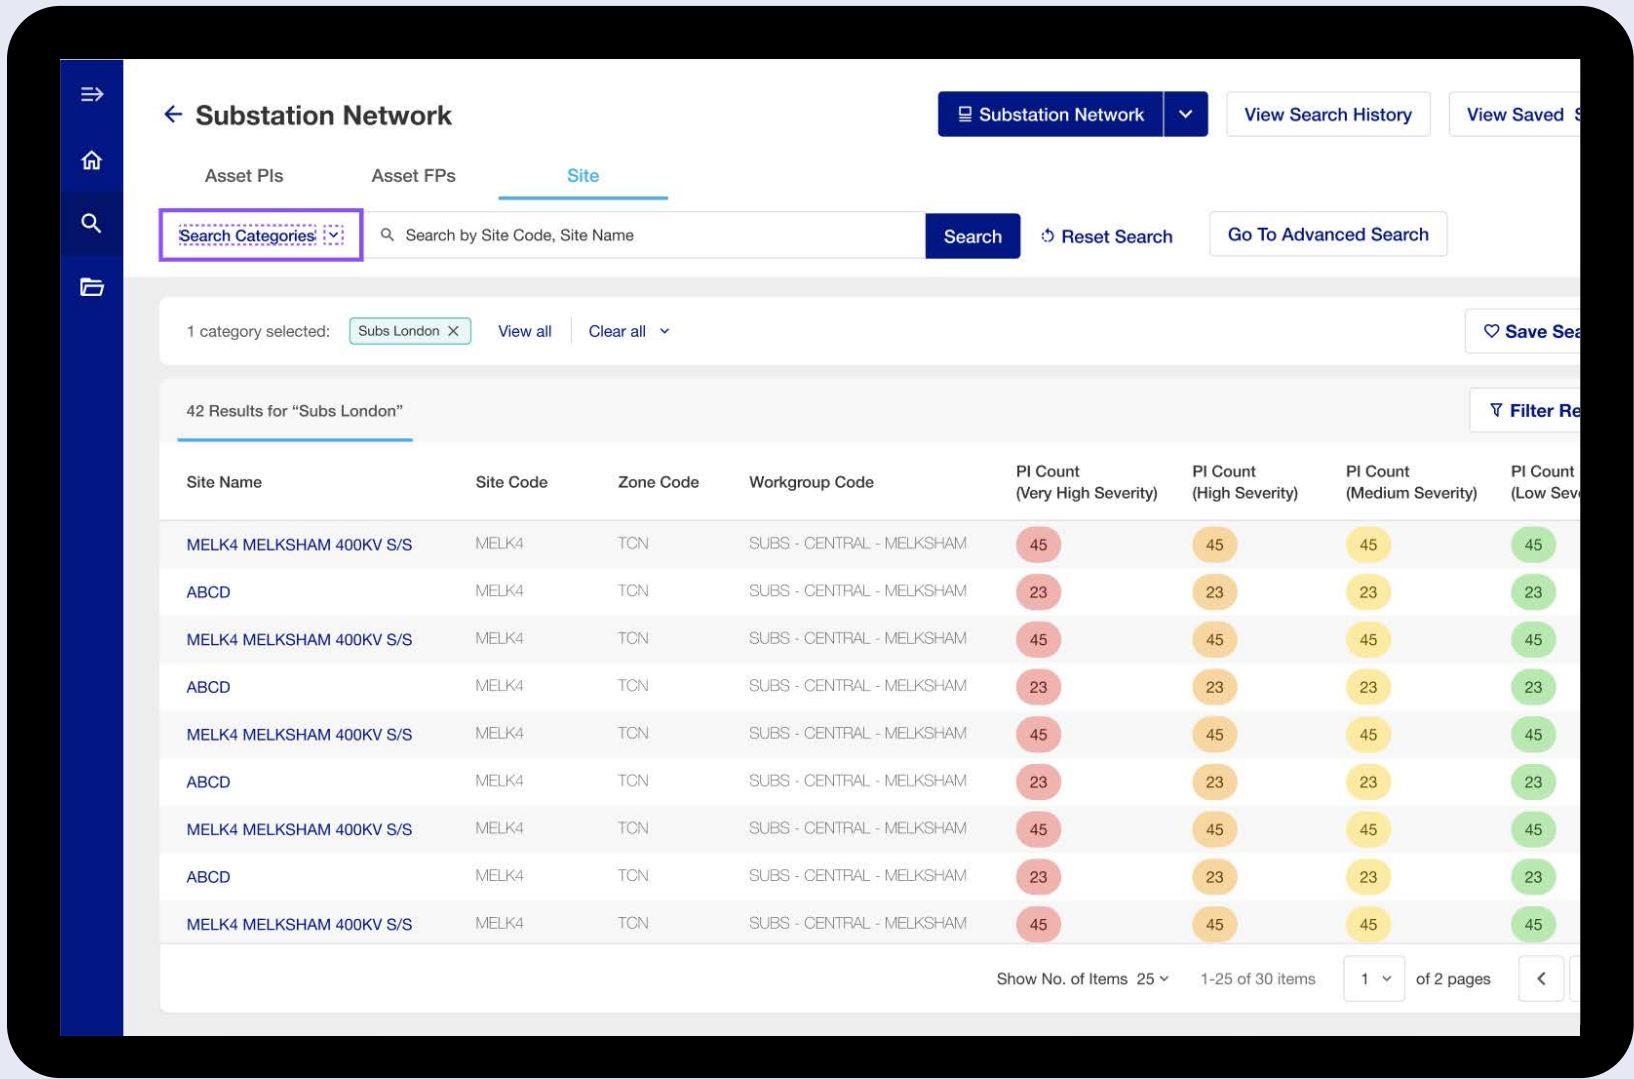

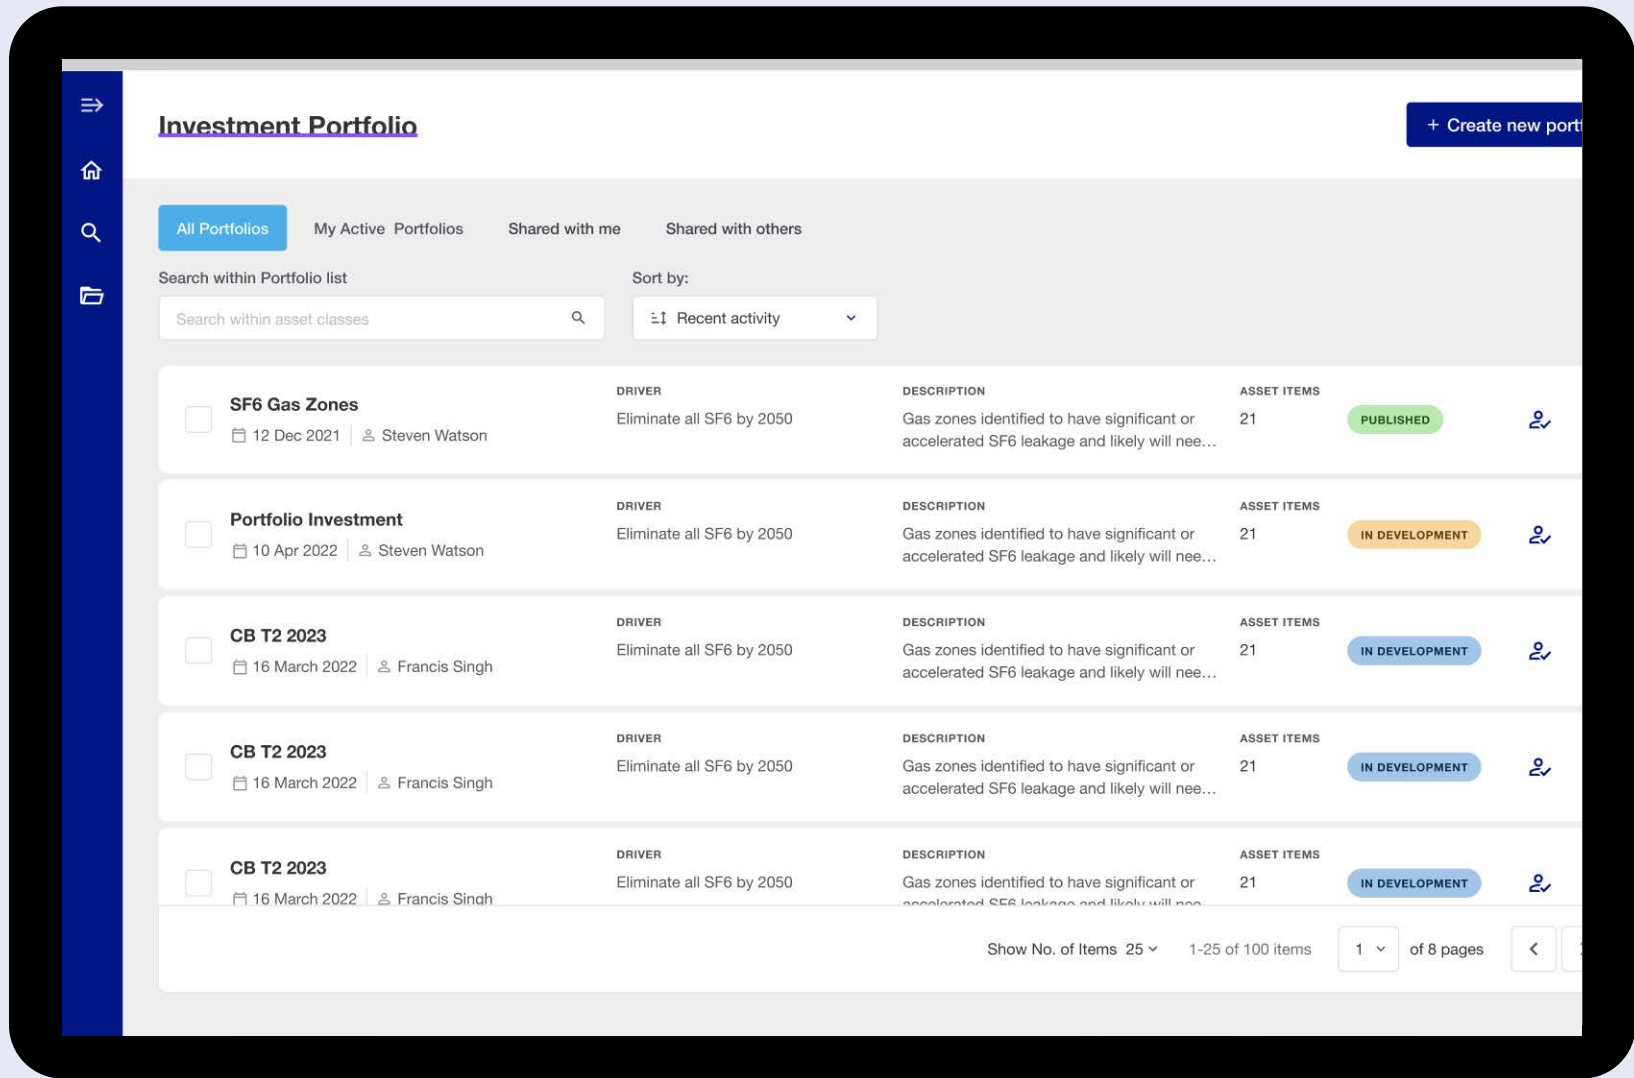

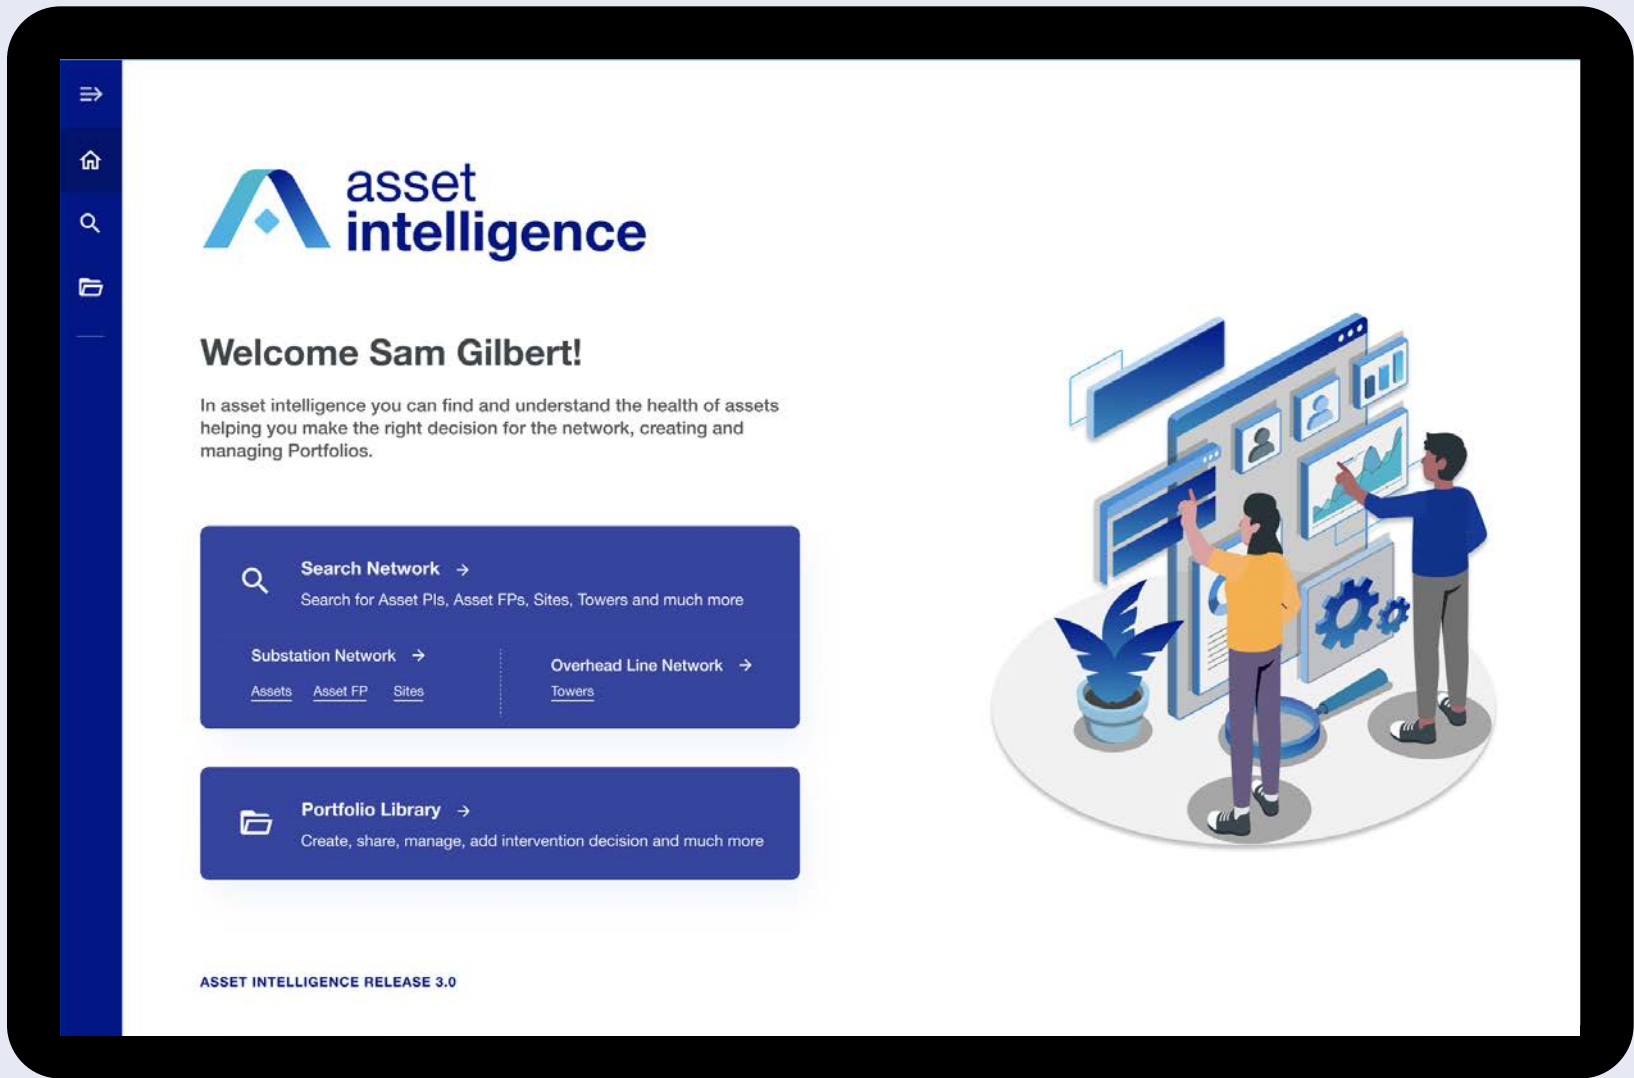

The Challenges

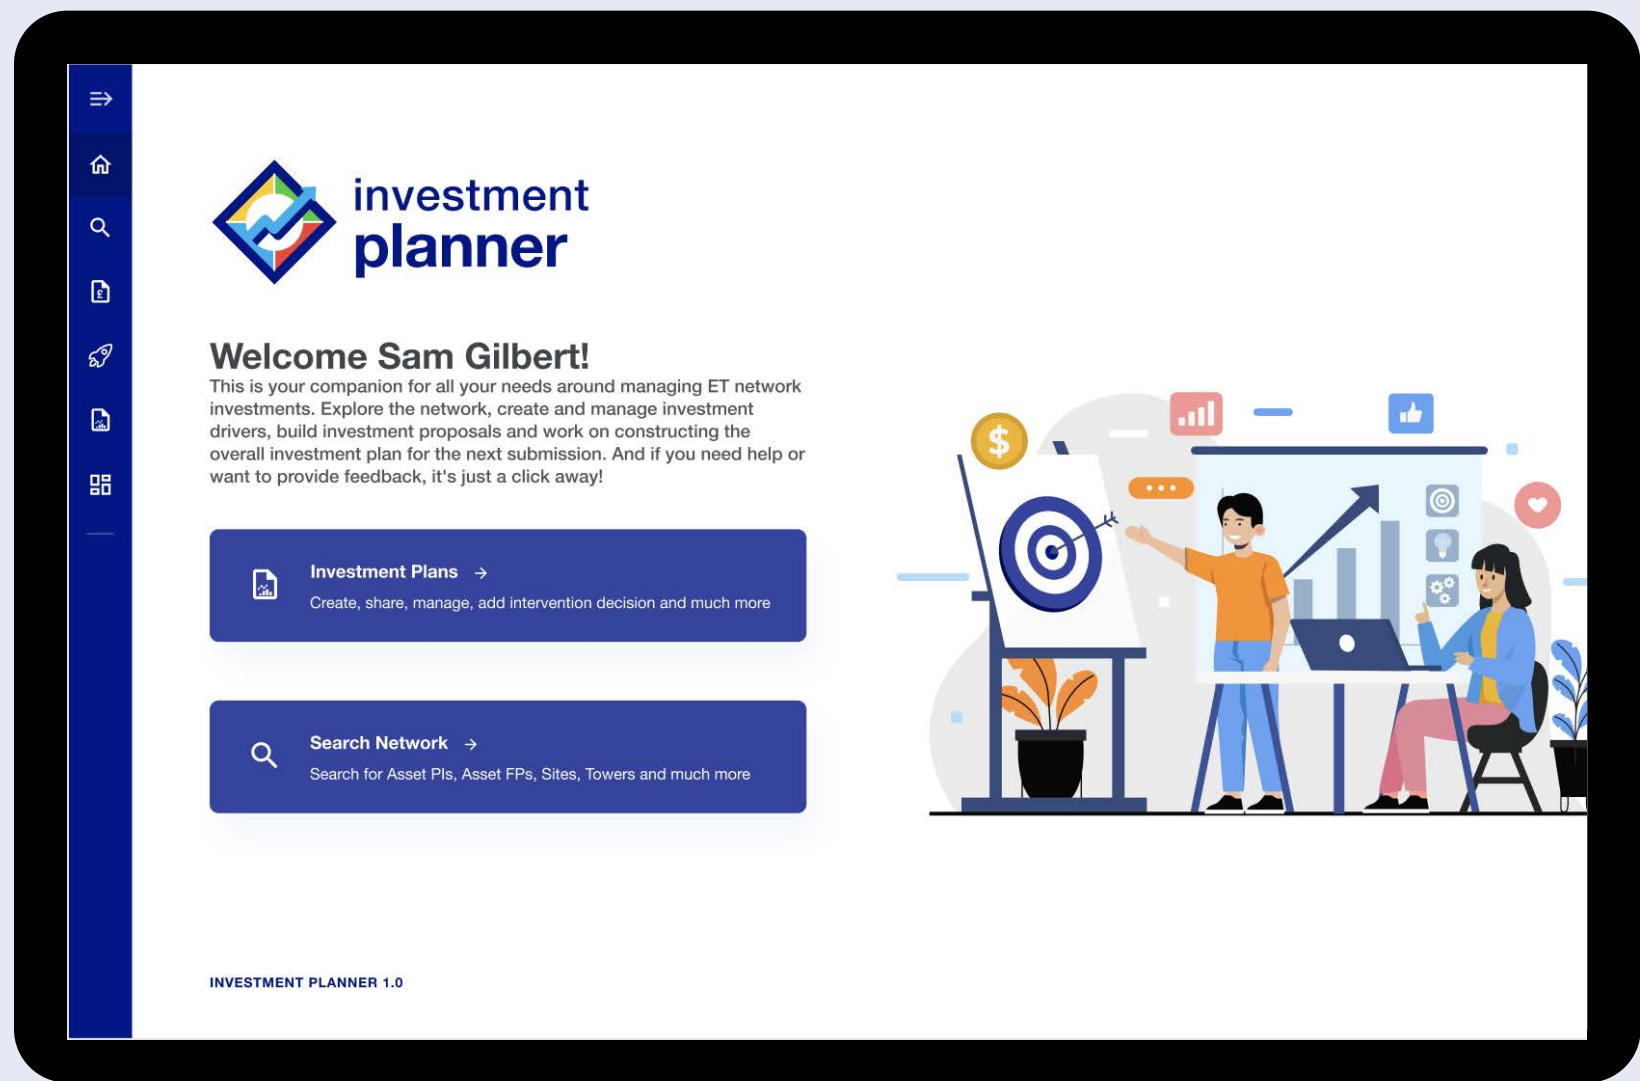

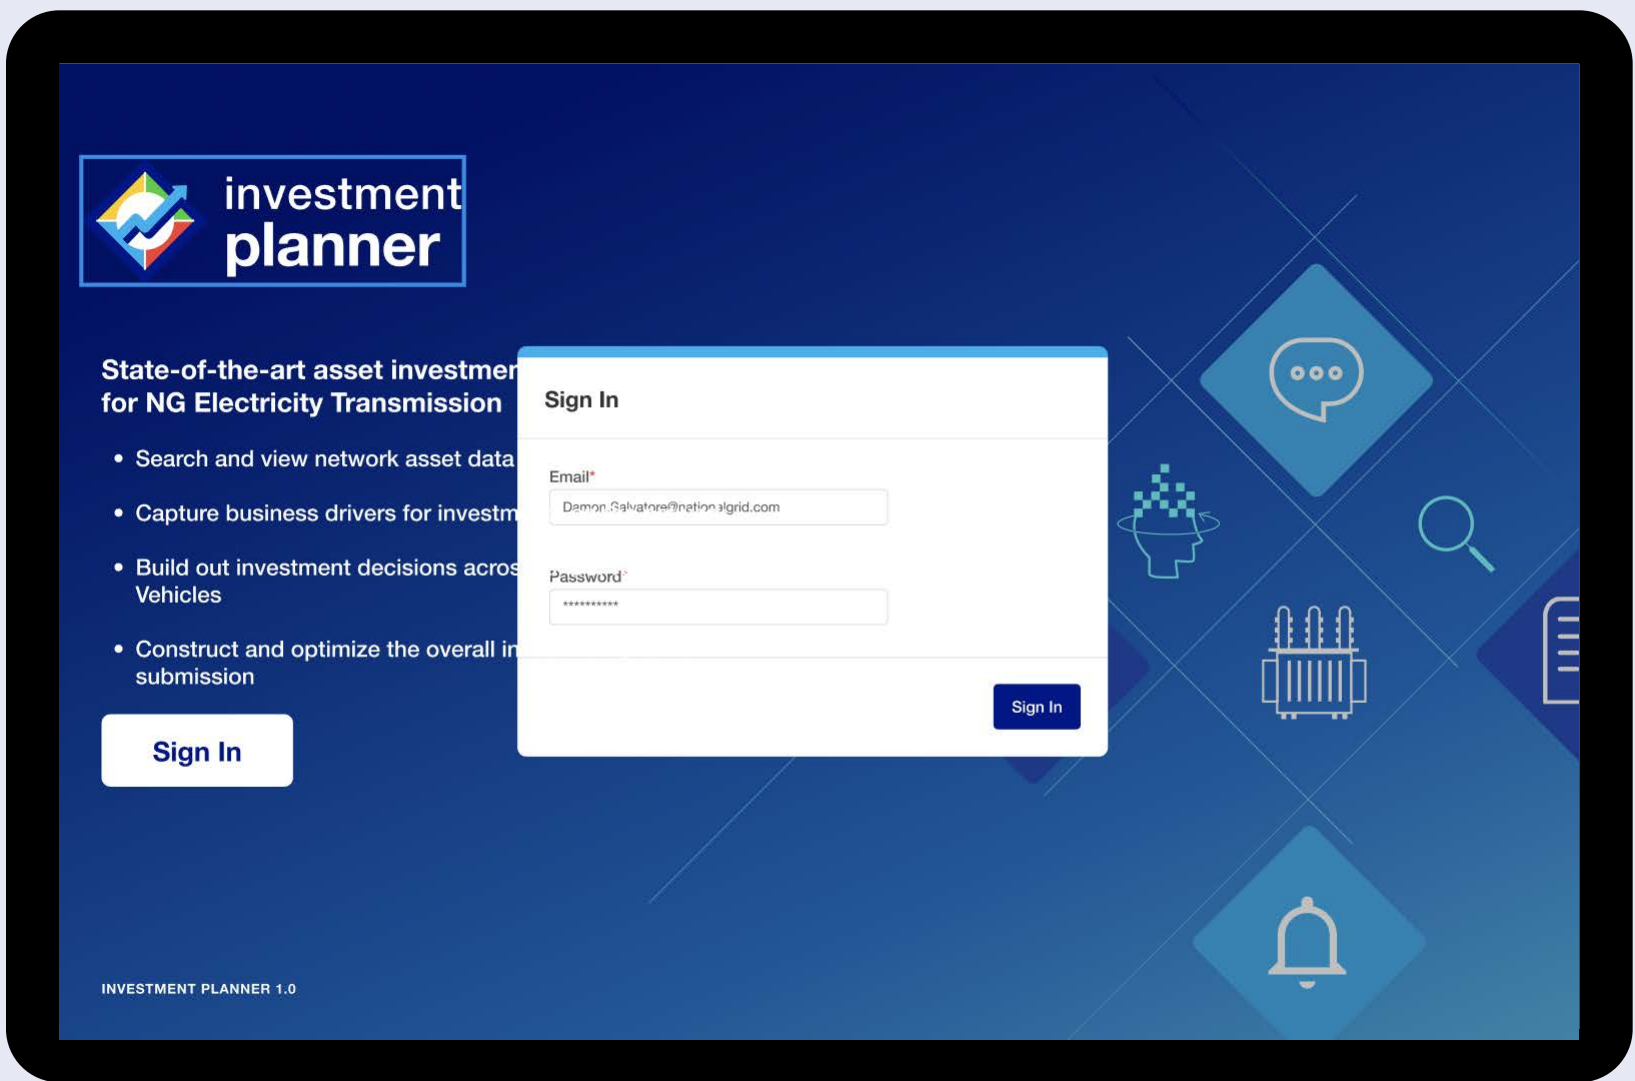

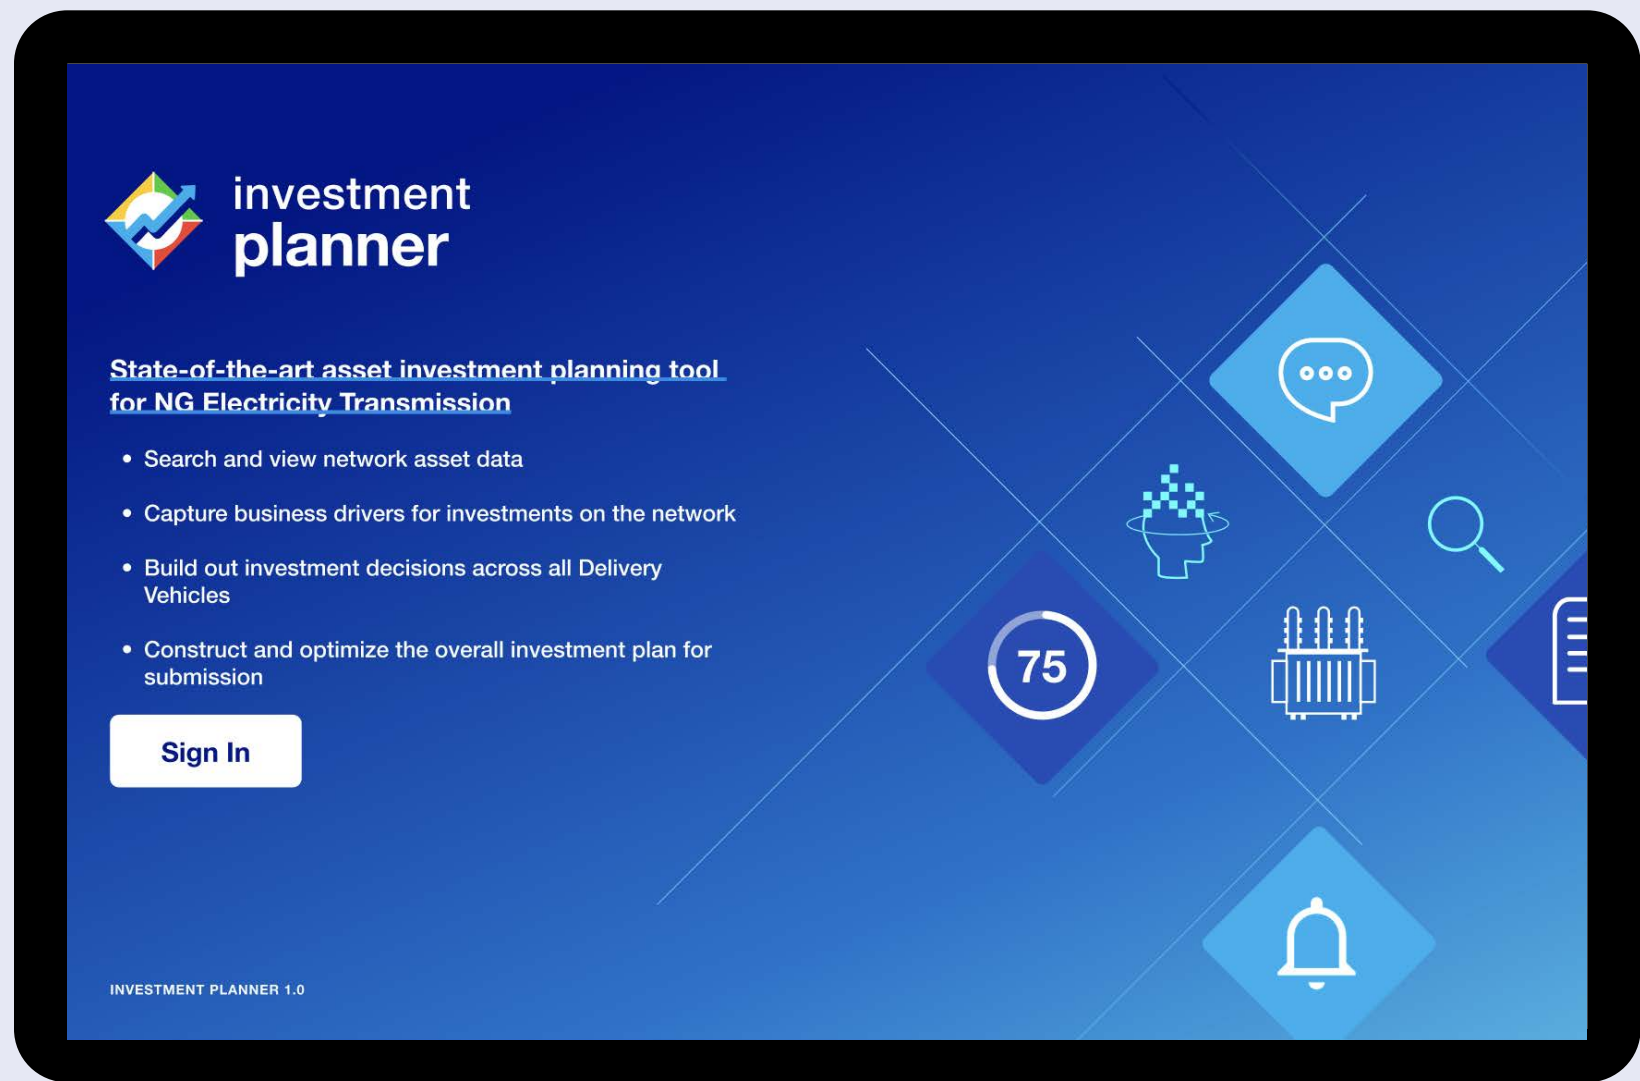

Achieving a time limit that is strict to expand into new ways and rapidly adjust Maintain system foundations in design.

Create a screen with the Design System's components, icons, and so on.

To be able to anticipate technological change, adapt to it, master it, succeed, and then be open to new influences in a very short period of time.
